Unlock Clearer Conversations with Roger

Are you wearing hearing aids but still struggling when someone is across the table or the room gets noisy? Meet Roger, the microphone system designed to help you hear what matters most.

When background noise, distance, and poor acoustics get in the way, even the best hearing aids can struggle. Roger helps by:

- Placing a wireless microphone close to the speaker so their voice is picked up clearly.
- Sending that voice directly to your hearing aids or cochlear implant, reducing the impact of noise, distance, and echo.
- Helping you follow conversations in challenging settings like restaurants, meetings, or social gatherings.

Who Can Benefit?

Whether you are at a noisy dinner, a meeting, teaching your child at home, or simply trying to enjoy life with clear conversation, Roger is built for:

- Anyone who already uses hearing aids or a cochlear implant and wants better hearing in noise.
- People with active lives at work, during travel, or in social situations.
- Parents and students – Roger supports children and teens in school and adults in work or social life.

How It Works

The person speaking turns on the microphone. Their voice is captured clearly, sent wirelessly, and delivered directly to your ears so you do not have to strain, guess, or lean in.

- Built-in technology listens around the room and picks the best direction of sound automatically.
- Connects to nearly any brand of hearing aid or implant through a compatible receiver or direct link.
- You can experience up to 62% better speech understanding in noise and at a distance when using Roger with your hearing aids compared to people without hearing loss.*

Pick the Right Roger for Your Life

Whatever your day looks like – meetings, meals out, school time, or relaxed chats – there is a Roger microphone designed to fit:

- A mic you clip on for one-on-one conversations.
- A mic you place in the middle of a table when several people are talking.
- A wearable mic for busy social settings or work environments.

Our team can help you match the model to your typical listening situations.

Ready to Talk About It?

If you have been avoiding gatherings because of the listening effort or find yourself nodding along when you wish you really heard, let's change that.

Call our practice and say: "I would like to explore Roger Wireless Microphones with my hearing aids." We will help you find the right model, show you how it works with your current aids, and arrange a demo so you can hear the difference for yourself.

Life's Better When You Are Included

Clear conversations, fewer misunderstandings, and less fatigue. Roger helps you reconnect in moments that matter.

Let's make sure your hearing aids do more than just work.
