

Are you hearing what you love?

Hearing changes are a natural part of aging—often subtle and easy to miss.

Any of this sound familiar?

- People sound like they're **mumbling**
- You ask others to **repeat** themselves
- Background noise makes **conversations hard to follow**
- The TV or phone **volume keeps creeping up**

If you're over 50, a quick hearing check is an easy step towards healthy aging.

- The World Health Organization recommends hearing screenings every 5 years, and more frequently after 65
